Glossary

Term	Description
Sudoku	Sudoku is a japanese game played in a 9x9 grid where each number (1-9) should only appear once in each row, once in each column and once in each 3x3 square.
Solve a Sudoku	The task is to solve a Sudoku, so that all empty cells are filled with numbers. This should be done by hand but can also be done by software.
Test a Sudoku	Each time a number is filled in, the person has to take care that there are no contradictions, so that the basic rules (each number just once in each row, column and square) are not violated.
Game store	This is a platform that makes several different online games available for the user. This could be done by gaining access to an online hosted game, an application or a game to download.
User	She/He is a person who wants to interact with the software. In this case she/he wants to play games online.
Premium user	She/He has an account and maybe pays for the service. So she/he gets additional benefits like early access, more games or less advertisement.
Admin	A user with additional rights who is in charge of the administration of the software and the platform. So she/he provides updates for the games as well for the technical part of the platform.
